COMPARISON: VRP® WALL SYSTEM VS. TYPE III VINYL WALL COVERING ASTM F793-10A CLASSIFICATION CRITERIA

Definition:

Type III Vinyl Wallcovering - Heavy duty: Usually produced on a drill fabric backing. Minimum weight is 22 oz. per square yard (33 oz. per linear yard for 54" wide). Federal specifications (FS CCC-W-408D) define these categories by strength, not weight.

Classification Criteria:

- 1.1** Covers the classification of wall covering by use characteristics, that is, according to its serviceability in use, recognizing that certain wall covering is designed primarily for decorative effect, while other wall covering is also designed to achieve a high degree of serviceability.
- 1.2** The values stated in inch-pound units are to be regarded as standard. The values given in parentheses are mathematical conversions to SI units that are provided for information only and are not considered standard.
- 1.3** This standard is used to measure and describe the properties of materials, products, or assemblies to heat and flame under controlled conditions, but does not by itself incorporate all factors required for fire hazard or fire risk assessment of the materials, products, or assemblies under actual fire conditions.
- 1.4** This standard does not purport to address all of the safety problems, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety and health practices and determine the applicability of regulatory limitations prior to use.
